6. Key Risks

Specific Risks of the Fund

Company Specific Risk

This risk arises when a company is exposed to adverse conditions or negative sentiments such as management issues, deteriorating business fundamentals or loss of competitiveness which is specific to a single company. As a consequence, the prices of fixed income securities issued by such company might fall and subsequently affects the Fund's performance. The impact of a specific company may be reduced when the Fund invests in a wide portfolio of investments consisting of fixed income securities issued by different companies thereby spreading the element of this risk through diversification.

Default Risk

This risk refers to the possibility that the issuer of the fixed income security or money market instrument is unable to make timely or full payments of principal and/or interest when due. In the event of a default in payment of principal and/or interest, this may cause a reduction in the value of the Fund. The Manager will endeavour to take the necessary steps to deal with the investments in the best interest of the unit holders including to dispose the defaulted investments within a time frame deemed reasonable by the Manager.

Current deposits and/or fixed deposits that the Fund has placed with financial institutions are also exposed to default risk. If the financial institutions become insolvent, the Fund may suffer capital losses with regards to the capital invested and interest foregone, causing the performance of the Fund to be adversely affected. Placement with financial institutions will also be made based on prudent selection.

Interest Rate Risk

Interest rate risk refers to the impact of interest rate changes on the valuation of fixed income securities and money market instruments. When interest rates rise, fixed income securities and money market instruments prices generally decline and this may lower the market value of the Fund's investment in fixed income securities and money market instruments. The reverse may apply when interest rates fall.

In order to mitigate interest rate risk, the Manager will need to manage the fixed income portfolio taking into account the interest or coupon rate and time to maturity of the fixed income securities and money market instruments.

Deposit Account Risk

When the Fund invests in deposits with financial institutions, the principal and interest are safeguarded by the financial institutions. If the financial institution becomes insolvent, the Fund may have difficulty in getting back the principal as well as interest.

Investors are reminded that the risks listed above may not be exhaustive and if necessary, they should consult their adviser(s), e.g. their bankers, lawyers, stockbrokers or independent professional advisers for a better understanding of the risks.

For more details, please refer to section 3 in the prospectus for the general risks of investing in the Fund.

Note: If your investments are made through an institutional unit trust adviser ("Distributor") which adopts the nominee system of ownership, you would not be deemed to be a unit holder under the deed and as a result, your rights as an investor may be limited. Accordingly, the Manager will only recognize the Distributor as a unit holder of the Fund and the Distributor shall be entitled to all the rights conferred to it under the deed.

7. Valuation of Investment

The Fund is valued at the end of each business day. The daily price of the Fund for a particular business day will be published on the next business day.
