6. Key Risks

Specific Risks

Company specific risk

Specific risks to Shariah-compliant securities issued by a company apply as there are adverse conditions or negative sentiments which a company can be uniquely exposed to, be it from the view of management issues, deteriorating business fundamentals or losing competitiveness. As a consequence, the price of Shariah-compliant securities issued by such company might fall and subsequently affect the Fund's performance. The impact of a specific company may be reduced as the Fund invests in a wide portfolio of investments thereby spreading the element of this risk through diversification.

Profit rate risk

This refers to the risk that the investment value of the Fund may generally be reduced due to a rise in future profit rates. Profit rate risk is particularly borne by profit-bearing assets, such as Shariah-compliant money market instruments or sukuk. In the event that a sukuk is held till maturity, the profit rate changes will not affect the yields of the sukuk. However, investors should be aware that whether the Fund will hold any sukuk until maturity will depend on actual and expected changes in profit rates.

Profit rates in Shariah-compliant money market instruments will fluctuate according to the overnight policy rate determined by Bank Negara Malaysia. On the other hand, sukuk are tradable and therefore, profit rates will be determined by supply and demand for such investments in the trading market. Shariah-compliant money market instruments and sukuk prices generally moves inversely with profit rates, the prices will decline when profit rate rises or are expected to rise. The price volatility is normally greater for longer-tenure profit-bearing asset rather than shorter-tenure profit-bearing asset as they are more sensitive to profit rate changes.

The Manager attempts to mitigate the profit rate risk of the Fund by managing the duration structure of the profit-bearing assets according to the Manager's view of the future profit rate trend. When profit rates are expected to increase, the Fund will switch to profit-bearing assets with shorter duration and are less sensitive to profit rate changes.

Default Risk

This risk will arise when the issuer of a sukuk fails to make timely payments of the profits and/or principal repayments on the maturity date. Shariah-compliant deposits that the Fund has placed with financial institutions are also exposed to default risk. If the issuer or financial institutions become insolvent, the Fund may suffer capital losses with regards to the capital invested and profit foregone, causing the performance of the Fund to be adversely affected.

Investors are reminded that the risks listed above may not be exhaustive and if necessary, they should consult their adviser(s), e.g. their bankers, lawyers, Shariah advisers, stockbrokers or independent professional advisers for a better understanding of the risks.

For more details, please refer to Chapter 3.6 in the prospectus for the general risks of investing in the Fund.
