MONTHLY COMMENTARY OF TARGET FUND

Performance Review

- Weakness in some of the US economic data (inflation and ISM services) in May led to a sigh of relief for investors as they were worried that US economy is too strong and there may be rate hikes instead of rate cuts. Consequently, US Treasury (“UST”) bond rallied with 10 year UST rate declining from 4.68% to 4.50%.
- Asian US\$ credit bond market rallied during the month due to lower rates as investment grade credit spread ended the month roughly unchanged. In May, overall JP Morgan Asia Credit Index (JACI) returned 1.33%.
- USD strength waned in May as markets were emboldened by increased rate cuts expectations; USD as measured by Bloomberg Dollar Index returned -1.46%. That said, overall Asian FX was flat in May as there was still overhang from Indian elections and still wide interest differentials between USD and local currencies (i.e. JPY).
- The fund posted returns of 1.00% in May; with bonds contributing 1.30% while FX and hedges contributed -0.30%.

Outlook and Strategy

- US data to face greater scrutiny in coming months as Fed will continue being data dependent in guiding their interest rate cycle. Continued string of softer US data will reinforced the narrative that Fed will remain on track to lower rates this year.
- Bank of Canada and European Central Bank delivered their first cut of 25 bps respectively in early June; suggesting that there is some divergence in DM’s respective interest rate cycles.
- Despite Modi’s government losing absolute majority in the election, barring some short term volatility, we still believe in the long term potential for India and expect India to be upgraded in 2025. We continue to like INR from a carry perspective.
- For Asia US\$ credit, we remain invested in investment grade credits but we take cognizant of the tighter spread since the beginning of the year. We have turned more constructive on selective HY credit, especially for credits with strong funding channel avenue and improving credit standing such as certain Japanese corporates, Indian HY renewables and selective Australian mining credits. These HY instruments are able to offer high single digit yields.
- Current portfolio yield stood at 6.32%, with an average portfolio credit rating of BBB+. Meanwhile, average portfolio duration for May was at 4.79 years.

The yield of the distributions are calculated based on the total dividend payout/ex-distribution NAV.

Based on the fund’s portfolio returns as at 31 May 2024, the Volatility Factor (VF) for this fund is 5.47 and is classified as “Low”. (Source: Lipper). “Low” includes funds with VF that are above 3.765 and less than or equal to 8.515 (source: Lipper). The VF means there is a possibility for the fund in generating an upside return or downside return around this VF. The Volatility Class (VC) is assigned by Lipper based on quintile ranks of VF for qualified funds. VF is subject to monthly revision and VC will be revised every six months. The fund’s portfolio may have changed since this date and there is no guarantee that the fund will continue to have the same VF or VC in the future. Presently, only funds launched in the market for at least 36 months will display the VF and its VC.

The term “Maybank AM” used herein refers to Maybank Asset Management. This Fund Fact Sheet (“FFS”) is for informational purpose only. You should seek your own financial advice from a licensed adviser before investing in this Fund. Maybank AM does not make any representations or warranties of any kind express or implied, about the completeness, accuracy, reliability, suitability or availability with respect to the information contained herein.
