6. Key Risks

Specific Risks of the Fund

Profit rate risk

Profit rate risk refers to the impact of profit rate changes on the valuation of Islamic money market instruments. When profit rates rise, Islamic money market instrument's prices generally decline and this may lower the market value of the Fund's investment in Islamic money market instruments. The reverse may apply when profit rates fall. In order to mitigate profit rate risk, the EIM will need to manage the Islamic money market instruments portfolio by taking into account the profit rate and time to maturity of the Islamic money market instruments.

Counterparty risk

When the Fund conducts over-the-counter (OTC) transactions, it may be exposed to risks relating to the credit standing of its counterparties and their ability to fulfil the conditions of the contracts it enters into with them. Hence, it is generally not applicable to transactions performed through exchanges. This risk is mitigated by performing fundamental credit research and analysis to determine the creditworthiness of the counterparty, and imposing an exposure limit as a precautionary step to limit any loss that may arise directly or indirectly as a result of a defaulted transaction.

Credit and default risk

Credit risk relates to the creditworthiness of the issuers of the Islamic money market instruments and their expected ability to make timely payment of profit and/or principal. Any adverse situations faced by the issuer may impact the value as well as liquidity of the Islamic money market instrument. In the case of rated issuers of Islamic money market instruments, this may lead to a credit downgrade. Default risk relates to the risk that an issuer of Islamic money market instrument either defaulting on payments or failing to make payments in a timely manner which will in turn adversely affect the value of the Islamic money market instruments. This could adversely affect the value of the Fund.

The risk is mitigated by investing in Islamic money market instruments with credit ratings of at least A3 or P2 by RAM or equivalent ratings by other rating agencies, portfolio diversification and due diligence in the credit assessments by ensuring high credit ratings as aforementioned. In the absence of a credit rating for the Islamic money market instruments, the credit rating of the issuer issuing the Islamic money market instruments will be used instead.

Shariah non-compliance risk

This is the risk of the Fund not conforming to Shariah Investment Guidelines. The Manager and EIM would be responsible for ensuring that the Fund is managed and administered in accordance with Shariah Investment Guidelines. Note that as the Fund can only invest in Shariah-compliant instruments, non-compliance may adversely affect the NAV of the Fund when the rectification of non-compliance results in losses.

Investors are reminded that the risks listed above may not be exhaustive and if necessary, they should consult their adviser(s), e.g. bankers, lawyers, Shariah advisers, stockbrokers or independent professional advisers for a better understanding of the risks.

For more details, please refer to section 3.5 in the master prospectus (Shariah funds) for the general and specific risks of investing in the Fund.

Note: If your investments are made through an institutional unit trust scheme adviser ("Distributor") which adopts the nominee system of ownership, you would not be deemed to be a unit holder under the deed and as a result, your rights as an investor may be limited. Accordingly, the Manager will only recognize the Distributor as a unit holder of the Fund and the Distributor shall be entitled to all the rights conferred to it under the deed.
