When a substantial amount of the original investment is being returned to the unit holders, it has a risk of eroding the capital of the Fund and may, over time, cause the NAV of the Fund to fall. The greater the risk of capital erosion that exists, the greater the likelihood that, due to capital erosion, the value of future returns would also be diminished.</p>

Asset Type	% of the Fund's NAV
Bonds issued by financial institutions and/or bank guaranteed bonds.	A minimum of 70%
Fixed Deposits and money market instruments.	A minimum of 5%

6. Key Risks

Credit and Default Risk

Credit risk relates to the creditworthiness of the issuers of the bonds or money market instruments, and their expected ability to make timely payment of interest and/or principal. Any adverse situations faced by the issuer may impact the value as well as liquidity of the bonds or money market instruments. In the case of rated bonds, this may lead to a credit downgrade. Default risk relates to the risk that an issuer of a bond or money market instrument either defaulting on payments or failing to make payments in a timely manner which will in turn

adversely affect the value of the bonds or money market instruments and the performance of the Fund.

This risk is mitigated by investing in bonds with credit rating of at least “A3” by RAM or an equivalent rating by MARC and carrying out due diligence in the credit assessments of the investments. In the absence of a credit rating for the bonds, the credit rating of the issuer issuing the bonds will be used instead.

Deposits that the Fund placed with financial institutions are also exposed to default risk. If the financial institutions become insolvent, the Fund may suffer capital losses with regards to the capital invested and interest foregone, causing the performance of the Fund to be adversely affected. Placement of deposits with financial institutions will also be made based on prudent selection.

Concentration Risk

Investors should be aware of the Fund’s possible concentration in exposure to a particular sector when investing in this Fund. The Fund will focus a greater portion of its assets in bonds issued by financial institutions and/or bank guaranteed bonds, exposing it to concentration risk in the sector of financial institutions. Given that, the Fund’s value and/or performance may be heavily dependent on the performance of the financial institutions.

Interest Rate Risk

Interest rate risk refers to the impact of interest rate changes on the valuation of bonds and money market instruments. When interest rates rise, bonds and money market instruments prices generally decline and this may lower the market value of the Fund’s investment in bonds and money market instruments. The reverse may apply when interest rates fall. In order to mitigate interest rate risk, the Manager will manage the bonds and money market instruments taking into account the time to maturity of the bonds and money market instruments.

Interest rate fluctuations also affect the deposits’ returns of the Fund. Interest rates offered by the financial institutions will fluctuate according to the overnight rate policy determined by Bank Negara Malaysia and this has direct correlation with the Fund’s investment in deposits. The Fund’s future reinvestment in deposits will benefit from the higher interest rate and in the event of falling interest rates, the Fund’s future investment in deposits will be reinvested at lower interest rates which in turn will reduce the Fund’s potential returns.

Distribution Out of Capital Risk

The Fund may distribute income out of its capital. The declaration and payment of distribution may have the effect of lowering the NAV of the Fund. In addition, distribution out of the Fund’s capital may reduce part of the unit holders’ original investment and may also result in reduced future returns to unit holders.

Investors are reminded that the risks listed above may not be exhaustive and if necessary, they should consult their adviser(s), e.g., bankers, lawyers, stockbrokers or independent professional advisers for a better understanding of the risks.

For more details, please refer to section 3 in the prospectus for the general and specific risks of investing in the Fund.

Note: If your investments are made through an institutional unit trust scheme adviser (“Distributor”) which adopts the nominee system of ownership, you would not be deemed to be a unit holder under the deed and as a result, your rights as an investor may be limited. Accordingly, the Manager will only recognize the Distributor as a unit holder of the Fund and the Distributor shall be entitled to all the rights conferred to it under the deed.

7. Valuation of Investment

The Fund is valued once at the end of every business day.

As such, the daily price of the Fund for a particular business day will be published on the next business day.

Please check with the respective distributors for their respective cut-off time.</i>
